

ACHIEVEIT FEATURE SINGLE SIGN-ON (SSO)

ENTERPRISE-LEVEL SECURITY, USER-FRIENDLY SIMPLICITY

Single sign-on (SSO) allows users to log into different applications with a single set of credentials provided and validated by their organization. Many organizations use SSO for security purposes, to remotely provide or revoke a user's access to enterprise applications.

Achieveit Single Sign-On enables your users to securely log in to Achieveit with their company credentials. Single sign-on is now available for all Achieveit customers.

We currently offer single sign-on via Azure Active Directory, Active Directory (AD), Active Directory Federation Services (ADFS), SAML, LDAP, WS-Federation, Google Apps (Enterprise), Salesforce and Sharepoint Apps.

ACHIEVEIT SINGLE SIGN-ON SETUP

Implementing single sign-on with Achieveit is an easy, quick process. To get started, please contact your Customer Success Manager, who will schedule a call with you, your IT team, and Achieveit's technical support team.
